

AMAN KUMAR | Smart Contract Developer

dhanyosmiresearcher@gmail.com | [X](#) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | +91 6204238614 | IST (GMT +5:30)

EXPERIENCE

Independent Web3 Security Researcher

Mar 2026 – Present

- CodeHawks public contest (BattleChain Confidence Pools) – reported **1 Medium, 1 Low** finding [Report](#)
- Private **Uniswap v3 integration** audit – **3 Critical, 3 High, 3 Medium, 4 Low** findings (confidential)
- Hardened BLOKCapital's price-feed oracle – added stale-price & L2 sequencer checks [Post](#)

Digichain ([Bima Labs](#) – [DeFi Protocol](#)) | Smart Contract Developer

Aug 2024 – Aug 2025

- Implemented **UUPS upgradable smart contracts** using the Succinct Protocol to enable on-chain verification of off-chain zero-knowledge proofs (ZKPs) [View Code](#)
- **LayerZero v2** – configured messaging, DVN and Foundry script for debugging and testing [View Scripts](#)
- Integrated **Chainlink CCIP** to enable lock/unlock mechanism for cross-chain transfers of USBD, and documented a comprehensive README guide [View Guide](#)
- **PSM** – implemented core logic, wrote unit and fuzz tests in Foundry, raising **code coverage to >95%** [PR #130](#)
- Optimized Hardhat deployment scripts and added **automated contract verification** as part of the deployment process, enabling **one-command deployment + verification** [PR #132](#)

HACKATHONS

Swarm Escrow | Solo | Won #3 (BOT Chain, AI Agent Track) | [GitHub](#) | [Live Demo](#) | [Demo Video](#)

- **Multi-agent 2-of-3 quorum** decides fund release; disputes escalate to a Senior Arbiter
- **83/83 Foundry tests passing** (72 unit, 9 fuzz, 2 invariant), Slither clean

FutureStack Gen AI Hackathon | Solo | [GitHub](#) | [Live Demo](#) | [Demo Video](#)

- My Invoice NFT - **full-stack NFT invoice DApp** with tested, gas-optimized Solidity contracts
- **AI-assisted** frontend integrated with IPFS & Polygon chain

PROJECTS

Stablecoin | Solidity | Foundry | [GitHub](#) | [Sepolia Testnet](#)

- Users can deposit WETH and WBTC in exchange for a token that will be pegged to the USD
- **Liquidation function** with bonuses to incentivize liquidation of under-collateralized positions
- Wrote **30+ Foundry unit tests** covering liquidation & collateral logic

Smart Contract Raffle | Solidity | Foundry | [GitHub](#) | [Sepolia Testnet](#)

- Developed a blockchain lottery smart contract that ensured randomness by utilizing **Chainlink VRF** and **Chainlink automation** for seamless smart contract execution
- Enabled flexible cross-chain deployment and conducted comprehensive testing using mock Chainlink tokens for robust contract performance

TECHNICAL SKILLS

Languages : Solidity, Java, Python, JavaScript, Rust (Basic)

Standards : ERC-20, ERC-721, ERC-4626, ERC-7540, EIP-1167

Protocols : Uniswap, Chainlink, LayerZero, UUPS

Tool & Testing : Foundry, Slither, Hardhat, Unit Testing, Fuzz Testing

EDUCATION

- Government Engineering College Khagaria | B.Tech | CSE | 2022–26 | CGPA: 8.85

ACHIEVEMENTS & CERTIFICATIONS

- Won 1st prize in Ideation Challenge organized by Department of Industries in college
- Blockchain and Its Application | NPTEL | May 2025 | [Certificate](#)
